

ADVANCED ADHESION INC.

MARKET-READY ADHESIVE FORMULATIONS

Introducing: Mr. Sticky's® Premium Adhesives

4 Specialty Epoxies packed in 2 dispensing systems!

Mr. Sticky's® Underwater Glue is an amazing adhesive that can actually be Applied Underwater! It bonds well to plastics such as PVC and ABS along with traditional materials such as Tile, Concrete, Fiberglass, Rubber, Wood and Metal. This adhesive is popular for pool & spa, marine, pond, irrigation, & plumbing applications. **If it sticks underwater... it will bond almost anywhere!**

Mr. Sticky's® Tentacle Glue® offers a new alternative in Wood Bonding. Clamp-less glue joints, exterior waterproof joints, flexible bonds, gap fills, bonds to wood *and* Plastics or Metals, applies wet or dry, has elasticity which helps restore joints to their original positions after bond stress is relieved. Traditional wood glues cannot do these tasks. Use for exterior gates, fences, doors, furniture, odd-shaped joints, chair legs and turnings. **Grip, Flex, Return**

Mr. Sticky's® Poly-Bonder Imagine being able to structurally bond Polyethylene!!! This has been virtually impossible in the past. Now, with a simple flame treatment and Poly-Bonder, one can create strong joints on Low, Medium, or High Density Polyethylene. The famous marine Starboard®, also a polyethylene blend, can now be joined with Poly-Bonder! Use for tank, door, pipe, irrigation, pond, marine, float, & automotive body repairs. **Versatile, Tough, Memory.**

Mr. Sticky's® Vibra-Bond combines epoxy's high bonding strength with flexible resiliency to make toughened bonds. This means that it can withstand significant Vibration, Shock, Bending, and Shrinkage/Expansion that typical epoxies cannot. With the ability to expand 108%, compared to typical epoxy's 1-4%, Vibra-Bond's joints bend as opposed to breaking! Use it for appliances, automotive or machinery. Bonds to plastics, metals, wood, ceramic, concrete. **Shake, Rattle, Roll!**

Mr. Sticky's® 30 gram manual syringe system: All four of our adhesives are packaged in the 30 gram dual-syringe. Simply cut the tips, dispense the adhesive, mix manually, apply, fit cap after use.

Mr. Sticky's® 57 gram auto-mix dispensing system: Use this system with all four adhesives to dispense 12 feet of 3/16" bead through a static mixing tip. Simple mount the dual cartridge in either a dispensing gun or caulking gun adapter, fit the mixing tip, and squeeze out perfectly mixed adhesives.
